1. TEST RESULTS SUMMARY

| Test Item | Star | ndard | Result |
|--|-----------------------|----------------------|--------|
| | ETSI EN 301 489-17 | ETSI EN 301 489-1 | |
| Continuous conducted disturbance voltage | 7.1 | 8.4 | Pass |
| Radiated disturbance | 7.1 | 8.2 | N/A |
| Harmonic of current | 7.1 | 8.5 | Pass |
| Flicker | 7.1 | 8.6 | Pass |
| ESD immunity | 7.2 | 9.3 | Pass |
| Radiated EM field immunity | 7.2 | 9.2 | Pass |
| EFT immunity | 7.2 | 9.4 | Pass |
| Surge immunity | 7.2 | 9.8 | Pass |
| Inject current immunity | 7.2 | 9.5 | Pass |
| Voltage dips and interruption immunity | 7.2 | 9.7 | Pass |

Remark:

- 1. The symbol "N/A" in above table means Not Applicable.
- 2. When determining the test results, measurement uncertainty of tests has been considered.

TEST REPORT

2. EMC RESULTS CONCLUSION

RE: EMC Testing Pursuant to Radio Equipment Directive 2014/53/EU Performed on the Air Purifier, Models: KJ350F-C350.

We tested the Air Purifier, Models: KJ350F-C350, to determine if it was in compliance with the relevant EN standards as marked on the Test Results Summary. We found that the unit met the requirements of ETSI EN 301 489-1, ETSI EN 301 489-17 standards when tested as received. The worst case's test data was presented in this test report.

Remark:

They all have a motor of the same type.

The production units are required to conform to the initial sample as received when the units are placed on the market.

TEST REPORT

3. LABORATORY MEASUREMENTS

Configuration Information

Support Equipment:

N/A

Rated Voltage and frequency under test: Condition of Environment: 230 V; 50/60Hz Hz Temperature: 22~28°C Relative Humidity:35~60% Atmosphere Pressure:86~106kPa

Notes:

1. The EMI measurements had been made in the operating mode produced the largest emission in the frequency band being investigated consistent with normal applications. An attempt had been made to maximize the emission by varying the configuration of the EUT.

2. The EMS measurements had been made in the frequency bands being investigated, with the EUT in the most susceptible operating mode consistent with normal applications. The configuration of the test sample had been varied to achieve maximum susceptibility.

3. Test Location:

Intertek Testing Services Shenzhen Ltd. Guangzhou Branch All tests were performed at: Room 02, & 101/E201/E301/E401/E501/E601/E701/E801 of Room 01 1-8/F., No. 7-2. Caipin Road, Science City, GETDD, Guangzhou, Guangdong, China Except Radiated Disturbance and Radiated Susceptibility were performed at:

Room102/104, No 203, KeZhu Road, Science City, GETDD Guangzhou, China

| No. | Item | Measurement Uncertainty |
|-----|-------------------------------------|-------------------------|
| 1 | Conducted Emission (9 kHz-150 kHz) | 2.79 dB |
| 2 | Conducted Emission (150 kHz-30 MHz) | 2.55 dB |
| 3 | Disturbance Power (30 MHz-300 MHz) | 3.04 dB |
| 4 | Radiated Emission (30 MHz-1 GHz) | 4.80 dB |
| 5 | Radiated Emission (1 GHz-6 GHz) | 4.97 dB |
| 6 | Radiated Emission (6 GHz-18 GHz) | 4.89 dB |

4. Measurement Uncertainty

The measurement uncertainty describes the overall uncertainty of the given measured value during the operation of the EUT.

Measurement uncertainty is calculated in accordance with CISPR16-4-2:2011+A1:2014 +A2:2018.

The measurement uncertainty is given with a confidence of 95%, k=2.

Determination of the test conclusion is based on IEC Guide 115 in consideration of measurement uncertainty.

Version: 02 December 2020

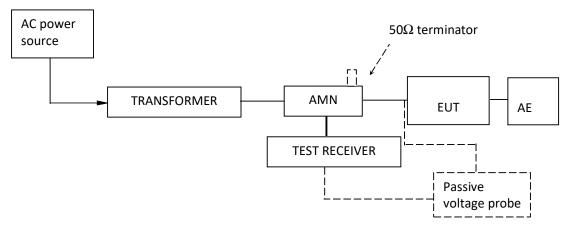

TEST REPORT

5. EMI TEST

5.1 Continuous Conducted Disturbance Voltage Test

| Basic Standard : | EN 55032: 2015 |
|------------------|----------------------|
| Classification : | Class B |
| Port : | AC mains input ports |

5.1.1 Block Diagram of Test Setup

5.1.2 Test Setup and Procedure

The EUT was set to achieve the maximum emission level. The mains terminal disturbance voltage was measured with the EUT in a shielded room. The EUT was connected to AC power source through an Artificial Mains Network which provides a 50 Ω linear impedance Artificial hand is used if appropriate (for handheld apparatus). The load/control terminal disturbance voltage was measured with passive voltage probe if appropriate.

The table-top EUT was placed on a 0.4m high non-metallic table above earthed ground plane(Ground Reference Plane). And for floor standing EUT, was placed on a 0.1m high non-metallic supported on GRP. The EUT keeps a distance of at least 0.8m from any other of the metallic surface. The Artificial Mains Network is situated at a distance of 0.8m from the EUT.

During the test, mains lead of EUT excess 0.8m was folded back and forth parallel to the lead so as to form a horizontal bundle with a length between 0.3m and 0.4m.

The bandwidth of test receiver was set at 9 kHz. The frequency range from 150 kHz to 30MHz was checked.

When measurements of disturbance are being made, the appliance shall be operated under the conditions defined in clause 7.

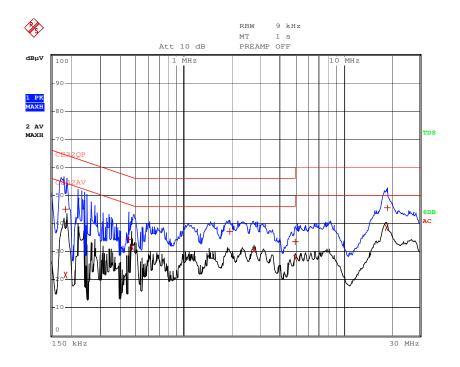

TEST REPORT

5.1.3 Test Data and curve

At mains terminal: Tested Wire: Live

Operation Mode: wireless connection

At load/control terminal:

Not Applicable.

TEST REPORT

5.2 Radiated Disturbance

Test Result: N/A

Remark:

N/A, since there are not any ancillary equipment connected to the radio equipment. The Radiated Emission test is only applicable to ancillary equipment not incorporated in the radio equipment and intended to be measured on a stand-alone basis, as declared by the manufacturer.

6. Harmonics of current

| Basic Standard : | EN 61000-3-2: 2014 |
|------------------|---------------------|
| Classification : | Class A |
| Port : | AC Mains Input Port |

6.1 Block Diagram of Test Setup

6.2 Test Setup and Procedure

Harmonics of the fundamental current were measured up to 40 order harmonics using a digital power meter with an analogue output and frequency analyser which was integrated in the harmonic & flicker test system. The measurements were carried out under steady conditions.

⊠This product is not defined as lighting equipment, and rated power(WIFI connection) is less than 75W, therefore, no limit applies according to EN 61000-3-2.

7. Flicker

| Basic Standard : | EN 61000-3-3: 2013 |
|------------------|---------------------|
| Port : | AC Mains Input Port |

7.1 Block Diagram of Test Setup

7.2 Test Setup and Procedure

7.2.1 Definition

| Flicker: | impression of unsteadiness of visual sensation induced by a lighting stimulus whose luminance or spectral distribution fluctuates with time. |
|----------|---|
| Pst: | Short-term flicker indicator The flicker severity evaluated over a short period (in minutes); Pst=1 is the conventional threshold of irritability |
| Plt: | long-term flicker indicator; the flicker severity evaluated over a long period (a few hous). Using successive Pst valuse. |
| dc: | the relative steady-state voltage change |
| dmax: | the maximum relative voltage change |
| d(t): | the value during a voltage change |

7.2.2 Test condition

The EUT was set to produce the most unfavourable sequence of voltage changes.

⊠This product(WIFI connection) is unlikely to produce significant voltage fluctuations and flicker by examination of the circuit diagram and specification of it. Therefore, it is deemed to fulfill the relevant standard without testing.

TEST REPORT

8. EMS TEST

performance criteria A for immunity test with phenomena of continuous nature; performance criteria B for immunity test with phenomena of transient nature; Performance criteria C for immunity test with power interruptions exceeding a certain time.

Measurement Uncertainty

According to CISPR 16-4-2:2003, measurement uncertainty to immunity test is under consideration.

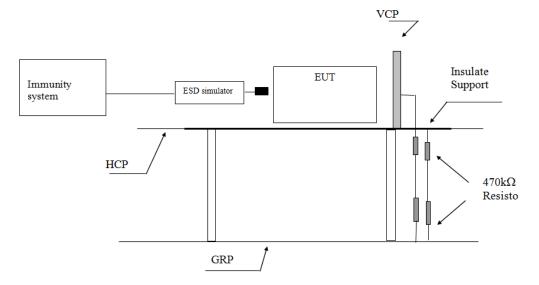

8.1 Electrostatic Discharge Immunity

| Basic Standard : | EN 61000-4-2: 2009 |
|----------------------------------|--|
| Port : | Enclosure |
| Required Performance Criterion : | Criteria B |
| | \pm 2.0, \pm 4.0, \pm 8.0 kV (Air Discharge) |
| Level : | ±4.0 kV (Contact Discharge) |
| | ±4.0 kV (Indirect Contact Discharge) |
| Temperature : | 23.2°C |
| Relative Humidity : | 58.4 % |
| No. of Discharge(s) : | Minimum of 10 Discharges per Each Polarity |
| Time Between Each Discharge : | 1 second |
| Test Mode : | wireless connection & EUT Standby |
| Test Setup : | Table-top |
| Test of Post-installation : | N/A |

8.1.1 Block Diagram of Test Setup

Note: HCP means Horizontal Coupling Plane,

VCP means Vertical Coupling Plane

GRP means Ground Reference Plane

8.1.2 Test Setup and Procedure

The EUT was put on a 0.8m high wooden table 0.1m high for floor standing equipment standing on the ground reference plane (GRP) 3m by 2m in size, made by iron 1.0 mm thick.

A horizontal coupling plane(HCP) 1.6m by 0.8m in size was placed on the table, and the EUT with its cables were isolated from the HCP by an insulating support thick than 0.5mm. The VCP 0.5m by 0.5m in size & HCP were constructed from the same material type & thickness as that of the GRP, and connected to the GRP via a 470k Ω resistor at each end.

The distance between EUT and any of the other metallic surface excepted the GRP, HCP & VCP was greater than 1m.

The EUT was arranged and connected according to its functional requirements.

Direct static electricity discharges were applied only to those points and surface which were accessible to personnel during normal usage.

TEST REPORT

On each preselected points 10 times of each polarity single discharge were applied. The time interval between successive single discharges was at least 1s.

The ESD generator was held perpendicular to the surface to which the discharge was applied. The discharge return cable of the generator was kept at a distance of 0.2m whilst the discharge was being applied. During the contact discharges, the tip of the discharge electrode was touched the EUT before the discharge switch was operated. During the air discharges, the round discharge tip of the discharge electrode was approached as fast as possible to touch the EUT.

Indirect discharge was conducted to objects placed near the EUT, simulated by applying the discharges of the ESD generator to a coupling plane, in the contact discharge mode.

After each discharge, the ESD generator was removed from the EUT, the generator was then retriggered for a new single discharge. For ungrounded product, a grounded carbon fibre brush with bleeder resistors ($2\times470 \text{ k}\Omega$) in the grounding cable was used after each discharge to remove remnant electrostatic voltage.

For air discharge, a minimum of 10 single air discharges were applied to the selected test point for each such area.

8.1.3 Test Result

| Direct Application of ESD | ation of ESD |
|---------------------------|--------------|
|---------------------------|--------------|

Direct Contact Discharge

| Applied Voltage (kV) | No. of Discharge for each point | Result | Discharged Points |
|-------------------------|------------------------------------|--------|--|
| 4 | 20 | N/A | Accessible metal parts of the EUT |
| | | | Conductive substrate with coating which is not declared to be insulating |

Direct Air Discharge

| Applied Voltage (kV) | No. of Discharge for each point | Result | Discharged Points |
|-------------------------|------------------------------------|--------|---|
| 2, 4, 8 | 20 | Pass | All accessible points where contact discharge cannot be applied such as Displays, Indicators light, Keyboard, Button, Switch, Knob, Air gap, Slots, Hole and so on |

Indirect Application of ESD

Horizontal Coupling Plane under the EUT

| Applied Voltage (kV) | No. of Discharge for each point | Result | Discharged Point |
|-------------------------|------------------------------------|--------|---|
| 4 | 20 | Pass | At the front edge of each HCP opposite the centre point of each unit of the EUT |

Vertical Coupling Plane beside the EUT

| А | opplied Voltage (kV) | No. of Discharge for each point | Result | Discharged Point |
|---|-------------------------|------------------------------------|--------|---|
| | 4 | 20 | Pass | The centre of the vertical edge of the coupling plane |

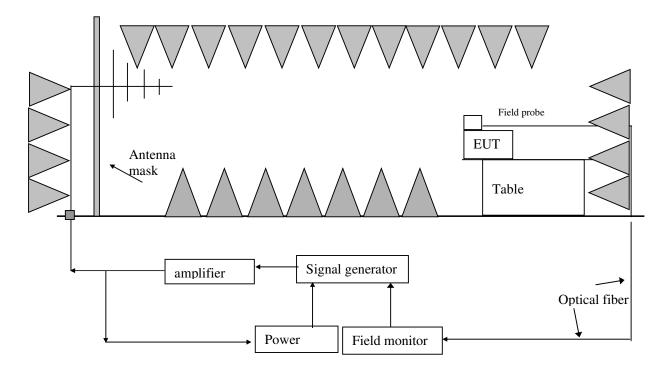

8.2 Radiated Electromagnetic Field Immunity

| Basic Standard : | EN 61000-4-3: 2006 + A1: 2008 + A2: 2010 | |
|----------------------------------|--|--|
| Port : | Enclosure | |
| Required Performance Criterion : | Criteria A | |
| Level : | 3.0 V/m (rms) | |
| Test Modulation : | 1kHz, 80% AM | |
| Frequency : | 80 MHz to 6000 MHz | |
| Dwell Time : | 3s | |
| Frequency Step : | 1% | |
| Temperature : | 22.0°C | |
| Relative Humidity : | 50 % | |
| Test Facility : | Full Anechoic Chamber | |
| Antenna Polarization : | Horizontal and Vertical | |
| Type of Antenna : | Log-periodic / Horn | |
| Test Distance : | 3m | |
| Test Mode : | wireless connection & EUT Standby | |
| Test Setup : | Table-top | |

TEST REPORT

8.2.1 Block Diagram of Test Setup

Filter

TEST REPORT

8.2.2 Test Setup and Procedure

The test was conducted in an fully anechoic chamber to maintain a uniform field of sufficient dimensions with respect to the EUT, and also in order to comply with various national and international laws prohibiting interference to radio communications.

The equipment is placed in the test facility on a non-conducting table 0.8m high (for floor standing EUT, is placed on a non-conducting support 0.1m height).

The EUT was placed on the uniform calibrated plane which is 3V/m EM field.

For all ports connected to EUT, manufacturer specified cable type and length was used, for those cables no specification, unshielded cable applied.

Wire is left exposed to the electromagnetic field for a distance of 1m from the EUT.

The EUT was arranged and connected according to its functional requirements

Before testing, the intensity of the established field strength have been checked by placing the field sensor at a calibration grid point, and with the field generating antenna and cables in the same positions as used for the calibration, the forward power needed to give the calibrated field strength was measured.

Spot checks was made at a number of calibration grid points over the frequency range 80MHz to 1000MHz, both polarizations was checked.

After calibration, the EUT is initially placed with one face coincident with the calibration plane. The frequency range is swept from 80MHz to 6000MHz, with the signal 80% amplitude modulated with a 1 kHz sine-wave, pausing to adjust the r.f. signal level.

The dwell time at each frequency was 3s so as that the EUT to be exercised and be able to respond. The step size was 1% of the fundamental with linear interpolation between calibrated points. Test was performed with the generating antenna facing each of the four sides of the EUT.

| Frequency (MHz) | Exposed Side | Field Strength (V/m) | Result |
|--------------------|--------------|-------------------------|--------|
| 80 to 6000 | Front | 3V/m (r.m.s.) | Pass |
| 80 to 6000 | Left | 3V/m (r.m.s.) | Pass |
| 80 to 6000 | Rear | 3V/m (r.m.s.) | Pass |
| 80 to 6000 | Right | 3V/m (r.m.s.) | Pass |

8.2.3 Test Result

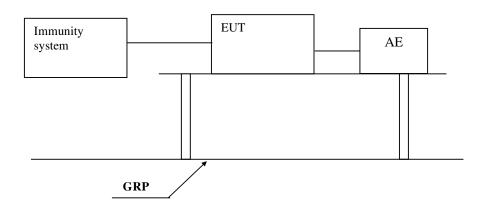

Note: The exclusion band is: 2280 -2603.5MHz

8.3 Electrical Fast Transient/Burst

| Basic Standard : | EN 61000-4-4: 2012 | |
|---------------------------------|-----------------------------------|--|
| Port : | A.C. Power Lines | |
| Required Performance Criterion: | Criteria B | |
| Level: | ±0.5, ±1.0kV | |
| Repetition Frequency: | 5 kHz | |
| Burst Duration: | 300 ms | |
| Test Duration | 1 minute per each polarity | |
| Test Mode: | wireless connection & EUT Standby | |
| Test Setup: | Table-top | |
| Generator Drive: | Internal | |
| Sequence of Application: | Each One | |

8.3.1 Block Diagram of Test Setup

8.3.2 Test Setup and Procedure

The EUT was placed on a 0.1m high wooden table, standing on the ground reference plane 3m by 2m in size, made by steel 1mm thick.

The distance between the EUT and any other of the metallic surface except the GRP was greater than 0.5m.

The mains lead excess than 0.5m was folded to avoid a flat coil and situated at a distance of 0.1m above the ground reference plane to insure the distance between the coupling device and the EUT was 0.5m.

TEST REPORT

The EUT was arranged and connected to satisfy its functional requirement and supplied by the coupling-decoupling network.

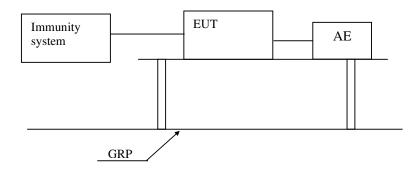

8.3.3 Test Result

| Port | Level | Result |
|--------------------------|-------------|--------|
| A.C. Power ports | \pm 1kV | Pass |
| Signal ports(>3m) | \pm 0.5kV | N/A |
| wired network ports(>3m) | \pm 0.5kV | N/A |
| control ports(>3m) | \pm 0.5kV | N/A |
| DC power ports(>3m) | \pm 0.5kV | N/A |

8.4 Surge Immunity

| Basic Standard : | EN 61000-4-5: 2014+A1:2017 | |
|----------------------------------|---|--|
| Port : | A.C. Power Lines | |
| Required Performance Criterion : | Criteria B | |
| Level : | \pm 1kV Live to Neutral, \pm 2 kV Live, Neutral to Earth | |
| Generator Impedance : | 2 ohm for Live to Neutral, 12 ohm for Live, Neutral to Earth | |
| Repetition Rate : | 1 minute | |
| Test Mode : | wireless connection & EUT Standby | |
| Test Setup : | Table-top | |
| Surge Generator Trigger : | Internal | |
| Phase Angle : | 0°, 90°, 180°, 270° | |

8.4.1 Block Diagram of Test Setup

TEST REPORT

8.4.2 Test Setup and Procedure

The surge was applied to the EUT power supply terminals via the capacitive coupling network.

Decoupling networks were required in order to avoid possible adverse effects on equipment not under test that might be powered by the same lines and to provide sufficient decoupling impedance to the surge wave so that the specified wave might be developed on the lines under test.

The EUT was arranged and connected according to its functional requirements.

The EUT was placed on a 0.1m high wooden support above the GRP), supplied by the coupling-decoupling network, and arranged and connected to satisfy its functional requirement. The power cord between the EUT and the coupling/decoupling network was less than 2 meters.

8.4.3 Test Result

| Level | | Result |
|----------------------------|-----|--------|
| Between Phase And Phase: | 1kV | N/A |
| Between Phase And Neutral: | 1kV | Pass |
| Between Phase And Earth: | 2kV | N/A |
| Between Neutral And Earth: | 2kV | N/A |

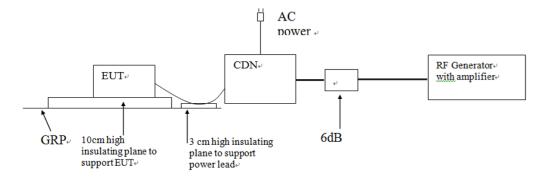

8.5 Injected Current

| Basic Standard : | EN 61000-4-6: 2014 | |
|----------------------------------|--------------------|--|
| Port : | A.C. Power Lines | |
| Required Performance Criterion : | Criteria A | |
| Level : | 3.0V (rms) | |
| Test Modulation : | 1 kHz, 80% AM | |
| Frequency : | 0.15 MHz to 80 MHz | |
| Dwell Time : | 3s | |
| Frequency Step : | 1% | |
| Temperature : | 23.2°C | |
| Relative Humidity : | 58.4 % | |

| Test Mode : | wireless connection & EUT Standby |
|-----------------------------|-----------------------------------|
| Test Setup : | Table-top |
| Equipment Under Test (EUT): | Single Unit |

8.5.1 Block Diagram of Test Setup

8.5.2 Test Setup and Procedure

The EUT was placed on an insulating support of 0.1m height above a ground reference Plane, arranged and connected to satisfy its functional requirement.

All relevant cables were provided with the appropriate coupling and decoupling devices at a distance between 0.1m and 0.3m from the projected geometry of the EUT on an insulating support of 0.03m height above the ground reference plane.

Test voltage was verified before each testing though power meter combined in the RF generator with AMP.

Dwell time was set to 3s and step was set as 1% to keep sufficient response time for EUT. The frequency from 0.15MHz to 230MHz was checked.

| Port: | Frequency (MHz) | Level | Result |
|--------------------------|-----------------|-------------|--------|
| A.C. Power Lines | 0.15 to 80 | 3V (r.m.s.) | Pass |
| signal ports(>3m) | 0.15 to 80 | 3V (r.m.s.) | N/A |
| wired network ports(>3m) | 0.15 to 80 | 3V (r.m.s.) | N/A |
| control ports(>3m) | 0.15 to 80 | 3V (r.m.s.) | N/A |
| DC power ports(>3m) | 0.15 to 80 | 3V (r.m.s.) | N/A |

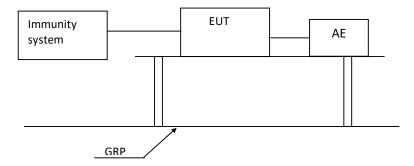

8.5.3 Test Result

8.6 Voltage Dips and Interruptions

| Basic Standard : | EN 61000-4-11: 2004 |
|---------------------------------|------------------------------------|
| Port : | A.C. Power Lines |
| Required Performance Criterion: | Criteria B: |
| | $0 \% U_T$ for 0.5 cycle, |
| | 0% U⊤ for 1 cycle, |
| | 70 % U _T for 25 cycles, |
| | Criteria C: |
| | 0 % U T for 250 cycles |
| | (TT & TR) |
| Level: | $0~\%~U_T$ for 0.5 cycle |
| | 0% U₁ for 1 cycle |
| | 0 % U_T for 250 cycle |
| | 70 % U⊤ for 25 cycle |
| No. of Dips/Interruptions | 3 |
| Test Mode: | wireless connection & EUT Standby |
| Test Setup: | Table-top |

8.6.1 Block Diagram of Test Setup

8.6.2 Test Setup and Procedure

The EUT was placed on an insulating support of 0.8m height, standing on a ground reference plane, and arranged and connected to satisfy its functional requirement

The test was performed with the EUT connected to the test generator with the shortest power supply cable as specified by the EUT manufacturer.

TEST REPORT

The EUT was tested for each selected combination of test level and duration with a sequence of three dips/interruptions with intervals of 10 s minimum. Each representative mode of operation was tested.

Abrupt changes in supply voltage was occur at zero crossings of the voltage.

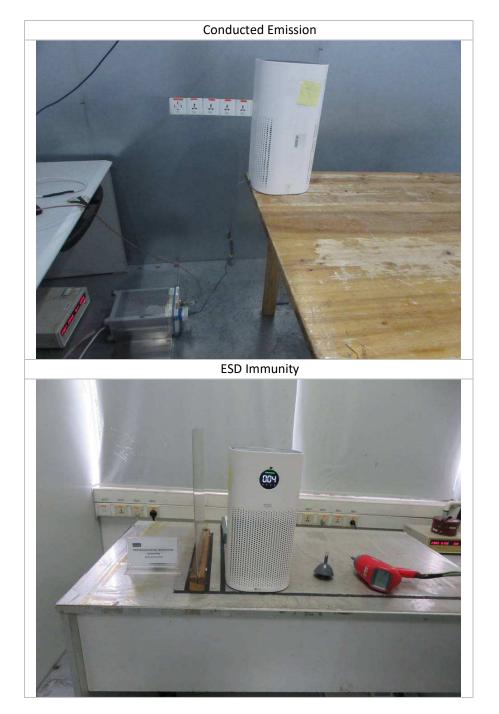

8.6.3 Test Result

| Test Condition | | Result |
|-------------------|-------------|--------|
| Test Level in %UT | Duration(s) | 50 Hz |
| 0 | 0.01 | Pass |
| 0 | 0.02 | Pass |
| 0 | 5 | Pass |
| 70 | 0.5 | Pass |

Remark: UT is the rated voltage for the equipment.
